

MLS PREVIEW+™

Convenient digital asset management

A powerful and cost-effective add-on component to Media Library System™ (MLS) that lets you view and manage video proxy files.

INGEST

PREVIEW

MANAGE

When you add MLS Preview+ to your MLS software, you can conveniently track analog and digital assets within one single application. View your entire digital archive, regardless of format, and manage your assets with more efficiency. In addition,

Preview+ incorporates either the IPV SpectreView player or The Grass Valley Aurora Browse player - or we can integrate a player of your preference. With this, you can take advantage of rich functionality; ingest, browse, log and clip selection.

"I can't imagine working a day without MLS. It's everything I wanted because it was custom designed for my company."

ERIK IVAN, CBS

PRODUCT BENEFITS

Easy Digital Asset Management

- + Access lo-res video proxy files on your desktop
- + Files are time code and frame accurate
- + Player compatible with MPEG-1, MPEG-2, WM9 or MPEG-4

Enhanced Video Logging

- + Easy-to-use Video Tape Recorder (VTR) type controls
- + Add on to existing metadata in MLS
- + Logging can be specific - down to the shot level

Flexible Digital File Access

- + Preview+ incorporates various encoding products
- + Receive frame-accurate access without lip-sync errors
- + Multiple audio-track ingest and scene change detection

Superior Edit Decision List (EDL) Manager

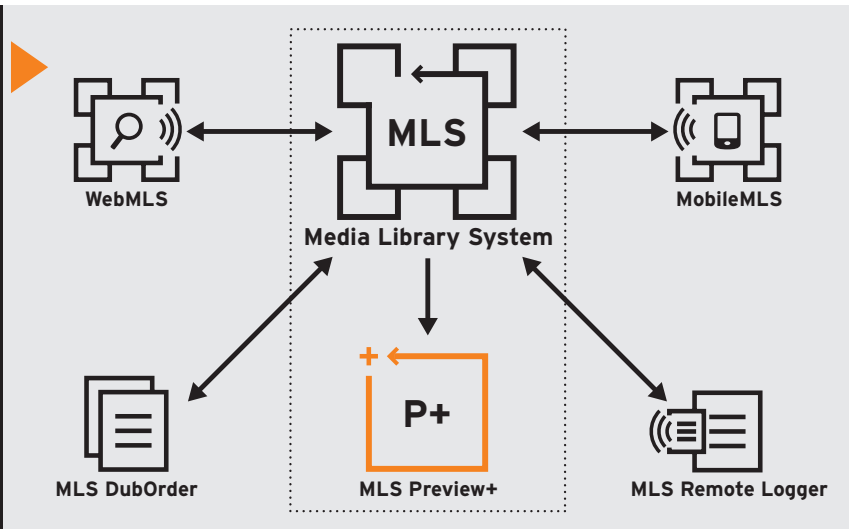

- + Effortlessly add clips to existing EDL list
- + Review and edit active EDL files at any time
- + Publish EDL files across multiple distribution channels

PRODUCT SUITE DIAGRAM

HOW IT WORKS

MLS Preview+

MLS Preview+ works with MLS to optimize your digital media management. It gives you the convenience of viewing and managing lo-res video proxy files on your desktop.
