MLS REMOTE LOGGER™
Update MLS logs from anywhere

Secure, remote access to your MLS logging.

ACCESS

LOG

UPDATE

MLS Remote Logger is an invaluable add-on component to your Media Library System (MLS) that lets off-site team members remotely update and transfer log data to your MLS. Users such as field producers and loggers can conveniently log from any location. In addition, there are built-in security measures to protect your log records from unauthorized use. This customized application will give your MLS more flexibility and increase productivity.

"Nesbit makes finding specific pieces of footage used in Broadcast operations highly efficient. It encompasses everything into one system and the ease of use is amazing."

DIRECTOR, LOGGING OPERATIONS, SPORTS NETWORK
